CURRENT SERIAL RECORDS

# LIST OF CHEMICAL COMPOUNDS

Approved for Use Under  
USDA Poultry and Poultry  
Products Inspection and  
Grading Programs

U. S. DEPARTMENT OF AGRICULTURE • Agricultural Marketing Service • Poultry Division  
Washington, D. C.

Revised August 1963

D. Floor and wall cleaners in all departments.

Before using these compounds, exposed food products and packaging materials must be removed from the room or protected. After using these compounds, equipment and utensils must be thoroughly rinsed with potable water before operations are resumed.

E. Scouring cleansers.

Residues resulting from the use of abrasives and scouring cleansers must be removed from the equipment by a thorough rinsing with potable water. Special attention to thorough rinsing is required on the part of plant personnel because resident inspectors shall not permit abrasive residues.

F. Sanitizers for use on equipment and utensils.

Sanitizers with a concentration of not more than 200 parts per million of available chlorine, iodine, or quaternary ammonium chloride compounds may be used on equipment and utensils. Before operations are resumed, the equipment and utensils must be thoroughly rinsed with potable water.

G. Liquid hand soaps.

The hand soaps must be dispensed from adequate dispensers located on a wall away from the processing line. After the use of the soap, the hands must be thoroughly rinsed with potable water.

H. Wetting agents for use in scald vats.

Wetting agents may be used in scald vats up to a maximum concentration of one (1) percent.

I. Boiler treatment compounds.

Steam from boiler water treated with these compounds is allowed to contact edible products.

J. Compounds for treating steam lines and closed cooling systems.

Steam or water from lines treated with these compounds is not permitted to contact edible products.

K. Compounds for use in sewage and drain lines only.

L. Compounds for use in toilets, dressing rooms, and plant exteriors only.

M. Compounds for use in offal rooms and plant exteriors only.

Permission for the use of these compounds on loading docks and similar areas is left to the discretion of the inspectors in charge of the plants.

N. Insecticides - edible product areas.

The following insecticides may be used in all areas:

Deodorized petroleum distillate solutions containing the following:

|            |                   |
|------------|-------------------|
| Allethrins | Pyrethrum extract |
|------------|-------------------|

|                                  |          |
|----------------------------------|----------|
| Organic thiocyanates or lethanes | Rotenone |
|----------------------------------|----------|

|            |
|------------|
| Pyrethrins |
|------------|

Concentrations of 1% or less of the following insecticides, singly, or in combinations with other permitted insecticides:

|                                      |                |
|--------------------------------------|----------------|
| Piperonyl butoxide                   | N-Propyl isome |
| N-Octyl dicycloheptane dicarboximide | Sulfoxide      |

Before using these insecticide compounds, exposed food products and packaging materials must be removed from the room or protected.

After using these compounds, equipment and utensils must be thoroughly rinsed with potable water before operations are resumed.

O. Insecticides - inedible product areas.

The use of the following insecticides is limited to inedible product areas:

Deodorized petroleum distillate solutions of:

|           |              |
|-----------|--------------|
| Chlordane | Lindane      |
| DDT       | Malathion    |
| DDVP      | Methoxychlor |
| Diazinon  | Ronnel       |

Concentrations greater than 1% of the following:

|                                      |                |
|--------------------------------------|----------------|
| Piperonyl butoxide                   | N-Propyl isome |
| N-Octyl dicycloheptane dicarboximide | Sulfoxide      |

Before using these insecticide compounds, exposed food products and packaging materials must be removed from the room or protected.

After using these compounds, equipment and utensils must be thoroughly rinsed with potable water before operations are resumed.

P. Insecticides, rodenticides, fumigants for controlled usage.

Insecticides

Under circumstances which preclude contact with the product, the following substances (properly mixed with inert materials) may be used as insect powders:

Borax or boric acid  
DDT powder (limited to areas where edible products are not handled)  
Derris root  
Powdered pyrethrum  
Powders containing organic thiocyanates or lethanes.  
Sodium fluoride (colored green or blue)

Baits shall not be placed in edible product areas until operations have ceased for the day. Strict account must be kept of the location and the number of baits set. Operations shall not be resumed until all the baits have been gathered and removed.

Rodenticides

The following rodenticides may be used under circumstances which absolutely preclude contact with edible products:

|                  |            |
|------------------|------------|
| Antu             | Red Squill |
| Barium carbonate | Warfarin   |

Baits shall not be placed in edible product areas until operations have ceased for the day. Strict account must be kept of the location and the number of baits set. Operations shall not be resumed until all the baits have been gathered and removed.

### Fumigants

Permission for the use of fumigants such as methyl bromide gas or hydrocyanic gas must be obtained from the inspector in charge. Fumigants are very dangerous and may be used only under the supervision of licensed, experienced operators. Poultry products and packaging materials must be removed from the rooms being treated. Before operations are resumed, sufficient ventilation must be provided to assure complete removal of the gases from equipment surfaces before operations are resumed. Thorough washing and a rinsing with potable water must follow fumigation procedures before operations are resumed.

The granting of permission to use marking inks, lubricants, paints, and coatings which do not come in direct contact with edible products or packaging materials is left to the discretion of the inspector in charge of the official poultry processing establishment. No approval is necessary from the Washington Office.

The Poultry Division accepts water used in official establishments as being potable when such certifications are made by State Health Agency Authorities. Chemicals which have been accepted for use for total in-plant treatment of potable water supplies are chlorine to reduce bacterial population, phosphates as sequestering agents, and small amounts of silicates for adjusting pH of the water.

\* \* \* \* \*

### USE CHEMICALS SAFELY ----- READ THE LABEL

The insecticides, rodenticides, bactericides, and detergent compounds listed herein should be used only by trained personnel. These compounds should be stored in dry, well-ventilated space which is kept locked to prevent use by unauthorized persons.

Many of these chemical compounds are poisonous. They should not be placed where children or animals can reach them. Solutions of these compounds should not be allowed to drain into streams where they may endanger fish or wildlife.

Labels of pesticides and most other compounds contain adequate directions for safe use. These directions should be carefully followed at all times, and all necessary precautions taken.

QUALITY CONTROL can be described as the result of a total of factors which include proper selection of raw materials, careful handling, judicious processing, adequate packaging, and effective, consistent sanitation. Proper sanitation is as fully important as the latest in modern equipment.

Flies, roaches, dirty equipment, dirty utensils, piles of trash, strong odors, or accumulations of grease, all indicate unsanitary procedures. Unless the equipment or utensils are given a good cleaning, chemical disinfectants or sanitizers are not adequately effective. Their use is of little value in the presence of excess organic matter.

Detergents are mixtures of chemicals that change the characteristics of dirt and soil so that they can be separated from the surface of equipment with a solvent, usually water.

ALKALINE DETERGENTS will condition the water, penetrate and wet the soil, disperse and emulsify the soil so it can be washed away. The common ones are:

- sodium carbonate
- sodium hexametaphosphate
- sodium hydroxide
- sodium metasilicate
- sodium or potassium soaps
- tetrkasodium pyrophosphate
- trisodium phosphate

ACID DETERGENTS are used primarily for removing scale formed from hard water precipitates. These are:

- mineral acids
- organic acids

SANITIZERS are chemicals which act as bactericides or fungicides to kill bacteria and fungi remaining on the surface after cleaning. These include:

- chlorine
- hydrogen peroxide
- iodine
- quaternary ammonium compounds

These cleaning compounds can be applied with brushes, spray cleaners, steam cleaners, and recirculating or pressure cleaners.
